PROFESSIONAL PROFILE

Application Support Engineer with 8+ years of experience in production support, incident management and technical operations on live, business-critical systems. Skilled at monitoring start-of-day and end-of-day jobs, diagnosing issues with SQL, logs, monitoring tools and API responses, triaging by business impact, and owning issues through to closure with Engineering, Product, Ops and partner teams. Managed 500+ monthly Salesforce tickets, supported 200+ enterprise users, maintained 99.9% service continuity and reduced recurring incidents by 35% through root cause analysis. Experienced in regulated healthcare environments, supporting audit and evidence requests with strong documentation and clear communication across technical and non-technical teams.

CORE COMPETENCIES

Production & Incident Support: Production Support • Incident Management • Triage & Escalation • Root Cause Analysis (RCA) • SLA Compliance • MTTR Improvement • Release & Rollout Support • Runbooks & Incident Documentation • Audit & Evidence Support

Monitoring, Data & Integrations: PA Monitor • Start-of-Day / End-of-Day Job Monitoring • Log & Error Analysis • MS SQL Server • API Response Analysis • Partner Data Flows • Monitoring & Alerting Improvements

Systems & Cloud: Azure (VMs, Networking) • Active Directory • Microsoft 365 • Exchange Online • SharePoint • Windows • Backup & Recovery • Patch Management • IT Policy Compliance

ITSM & Tools: Jira • Salesforce • Avaya One-X • Genesys • Remote Support Tools • ITIL-Based Incident & Service Request Management

Endpoint & Network: Desktop/Laptop/Printer Support • Windows, Microsoft Office, Outlook & Teams Support • User Account Management & Password Resets • OS Installation • Software Deployment • LAN/Wi-Fi • VPN & Remote Access • Asset Records

PROFESSIONAL EXPERIENCE

Application Support Engineer | CorroHealth **Sep 2023 – Sep 2026**

- Provided first-level support for desktops, laptops, printers, Windows, Microsoft Office, Outlook and Microsoft Teams, resolving hardware, software and access-related issues for users via phone, email, ticketing systems and remote support tools.
- Logged, tracked, prioritized and resolved incidents and service requests in Jira and Salesforce within agreed SLA timelines, following ITIL-based incident and request management practices.
- Handled user account creation, password resets and access permissions in Active Directory and Microsoft 365, following IT security policies, procedures and standard operating guidelines.
- Installed, configured and maintained IT hardware and software, including OS installation and software deployment, and kept asset records accurate and up to date.
- Maintained accurate records of incidents, resolutions and user communications, and gave users timely updates throughout the ticket lifecycle to ensure customer satisfaction.
- Monitored production systems and mission-critical start-of-day and end-of-day jobs via PA Monitor, catching failures and slow runtimes early and sustaining 99.9% service continuity.
- Diagnosed and resolved live issues using MS SQL Server queries, logs, monitoring tools and API responses, applying safe mitigations and hotfixes to restore service quickly.
- Triaged 500+ monthly Salesforce tickets by urgency and business impact, escalating clearly and promptly to higher-level teams with full context.
- Troubleshot across external providers, partner data flows, APIs and operational hand-offs to isolate where issues originated.
- Owned issues through to closure, chasing Engineering, Product, Ops and partners until fixed; RCA cut incident recurrence by 35% and improved MTTR.
- Supported production releases, rollouts, upgrades and security patching with readiness checks, QA and post-deployment monitoring.
- Maintained runbooks, incident documentation and knowledge articles, and helped improve monitoring and alerting to reduce incident volume.

- Supported audit, control and evidence requests in a regulated healthcare environment, following IT policy and security standards.
- Supported Azure VMs/networking and MS SQL Server performance for 200+ users; administered Active Directory provisioning, access control and secure offboarding.
- Troubleshot LAN/Wi-Fi, VPN, URL whitelisting and shared-resource issues for on-site and remote users; first point of contact via ticketing, email and phone, closing within SLA.

Senior Process Executive | Cognizant **Jan 2022 – Aug 2023**

- Supported EmblemHealth healthcare claims-processing workflows through EDI and related operational systems.
- Reviewed high-volume medical claims, appeals, denials, and reprocessing per plan guidelines; coordinated with provider and billing-office teams to resolve discrepancies.
- Maintained accurate case documentation and handled sensitive healthcare data with confidentiality and compliance; achieved 99.5% processing accuracy.

Associate IT Consultant | Sutherland Global Services **Apr 2019 – May 2021**

- Provided first-level inbound and remote technical support for McAfee customers, handling 40–50 calls per day via Avaya One-X and Genesys.
- Diagnosed and resolved live issues using logs, system diagnostics and remote-support tools, covering OS, update, boot failure, system-service and performance problems, and applying safe mitigations to restore service.
- Triaged cases by urgency and customer impact, escalating clearly and promptly to higher-level teams and owning issues through to closure.
- Troubleshot across third-party providers and hand-offs, including Microsoft 365 authentication, email sync (IMAP) and network connectivity errors.
- Supported software updates and patches with validation checks and post-update follow-up; supported antivirus and endpoint-security installation and threat troubleshooting.
- Maintained detailed case documentation and troubleshooting guides, and supported quality audits and evidence requests, with 95%+ customer satisfaction under SLA targets.

Customer Support Executive | Foundever (formerly Sitel) **Oct 2017 – Mar 2019**

- Provided first-level inbound technical support to Bell Canada customers for broadband, routers, IPTV, email, connectivity, and service activation.
- Troubleshot Wi-Fi/LAN issues, slow or intermittent internet, router configuration, device connectivity, and email setup using remote access to router/modem interfaces.
- Documented troubleshooting steps and resolutions accurately while handling high-volume interactions under SLA and quality targets.
